PRATEEK GUPTA

Tamil Nadu, India | guptaprateek0610@gmail.com | +91-9868641214 | linkedin.com/in/prateek-gupta-a39483316 | github.com/prateekg-06 | https://prateekg-06.github.io/portfolio/

PROFESSIONAL SUMMARY

Computer Science Engineering student with hands-on experience in JavaScript, Python, and Java gained through an internship, personal projects, and industry-recognized virtual experience programs in software engineering. Strong foundation in data structure.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science Engineering *Expected 2028*
VIT Vellore Current CGPA: 9.18

Completed 12 from CBSE with 86% *In 2023*

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, C/C++

Frontend Technologies: HTML, CSS

Backend & Software Engineering: Data Structures

Databases: SQL

Tools & Platforms: Git, GitHub, VS Code, Excel

PROFESSIONAL EXPERIENCE

Python Developer Intern | QSkill | Remote *Jun 2026 – Jul 2026*

- Developed a house price prediction application using Python, Pandas, NumPy, and Scikit-learn, applying data preprocessing, feature engineering, and linear regression modeling.
- Built a voice-activated personal assistant in Python using speech recognition, text-to-speech (TTS), and API integration to execute voice commands.
- Designed a matrix operations tool using NumPy to perform matrix arithmetic, transformations, and linear algebra computations.
- Applied data preprocessing, predictive modeling, and software development best practices across multiple user-focused Python applications.
- Collaborated in a remote development environment, strengthening debugging, problem-solving, and software engineering skills.

PROJECTS

Client & Vendor Contact Management System | Python

- Built a Python console application for managing business contacts with add, view, update, delete, and keyword search functionality.
- Implemented Client, Vendor, and Partner category filters with a dashboard summarizing record counts by category.
- Added JSON-based data storage and CSV export for persistence and reporting.

my-slot | Python, Flask, SQLite

- Developed an appointment scheduling platform with live availability, customer booking flow using 30-minute slots, and provider schedules.
- Prevented duplicate bookings using SQLite constraints and conflict handling (HTTP 409 responses).
- Built REST endpoints for availability, booking, and cancellation, along with customer booking history.

ImpactLens AI | Next.js, FastAPI

- Built an evidence-backed test-planning prototype that analyzes change impact and ranks targeted test recommendations.

- Applied deterministic risk scoring before AI-generated explanations, supported by dependency context and evidence chains.
- Developed a frontend dashboard backed by a FastAPI service.

EcoPulse | HTML, CSS, JavaScript

- Created a carbon-footprint awareness app that translates CO2 values into relatable real-world daily-life equivalents.
- Implemented a real-time interactive CO2 slider with category filters for travel, food, energy, products, and trees.
- Delivered as a single-file static application with no external dependencies.

PROFESSIONAL SIMULATIONS & CERTIFICATIONS

Walmart USA — Advanced Software Engineering Virtual Experience Program

- Built a custom heap-based data structure in Java for shipping operations.
- Designed UML class diagrams and entity-relationship diagrams for scalable systems.

Skyscanner — Front-End Software Engineering Virtual Experience Program

- Customized frontend components and implemented automated testing workflows.
- Strengthened frontend development and JavaScript programming skills.

JPMorgan Chase — Software Engineering Job Simulation

- Built a microservice using Java to process financial transactions in an event-driven architecture to support transaction validation and balance updates.

Additional Certifications

- Google — Stay Ahead of the AI Curve: Use AI as a Creative or Expert Partner
- IBM — Generative AI

RELEVANT COURSEWORK

Data Structures & Algorithms | Object-Oriented Programming

LEADERSHIP & ACTIVITIES

- Actively share technical learning milestones and certifications on LinkedIn.
- Participate in hackathons, coding events, and technical communities.
- Continuously explore AI, cybersecurity, and software development through self-directed learning.
- Google Student Ambassador’ 26
